

Extenders

Suspended Ceiling Fixture

Installation Instructions

1. Thread jam nut onto rod. Insert rod through hole provided in aluminum track (see detail). Add lock nut. Do not allow threaded rod to protrude through lock nut. Tighten jam nut against aluminum track. Repeat for remaining rod(s).
2. Remove the cap from one end of the sign's ceiling mount extrusion and insert the rod assembly. Replace the end cap.
3. Adjust the rod assembly to align with the desired ceiling mount positions. NOTE: It is recommended that these positions be located beneath "above-ceiling" structural members (see step 7). Maintain a minimum 3" distance away from ceiling grid.
4. Transfer the position of each threaded rod onto the ceiling tile and drill 3/8" diameter clearance holes.
5. Determine distance between bottom of ceiling and top of sign assembly and cut decorative extenders to this length. Slide sleeves then washers over rod assemblies. Insert rod ends into holes in ceiling tile(s).
6. Through adjacent ceiling tile, position aluminum angles over rods and secure with lockwashers and wing nuts provided.
7. Attach safety cable securely to any "above-ceiling" structural member (ie. joist, beam, etc.). NOTE: Do not fasten cable to existing pipes, conduits, or any utility lines or hangers.
