

Swivel Mount Ceiling Fixture

Installation Instructions

1. Apply a small amount of Loctite onto one end of Support Rod and thread fully into Eye Coupling. Repeat for other rod.
2. Locate the sign assembly into the desired ceiling mount position. NOTE: It is recommended that position be located beneath "above-ceiling" structural members (Refer to Step 7). Also, assure to maintain a minimum 3" distance away from ceiling tile grid.
3. Transfer position of each rod onto ceiling tile and drill 3/8" diameter holes.
4. To access mounting hardware, temporarily remove adjacent ceiling tile(s).
5. If optional Decorative Sleeves are being used, determine distance between bottom of ceiling and top of sign assembly. Cut Decorative Sleeves to this length. Slide sleeves over rods then insert rod ends into holes in ceiling tile(s).
6. Once rods are inserted through holes in ceiling tile, position Mounting Angles over rod ends and secure with lockwashers and wing nuts provided. The sign assembly can be leveled by turning wing nuts accordingly.
7. Attach Safety Cable securely to any "above-ceiling" structural member (ie. joist, beam, etc.). NOTE: Do not fasten cable to existing pipes, conduits, utilities or utility line hangers.
